

360 Cyber Risk Assessment

NIST CSF or ISO27k-based
including ISMS-Tool

Benefit

- Identify and defuse your business cyber risks
- Get actionable mitigation including quick wins
- Ultimately increase digital success

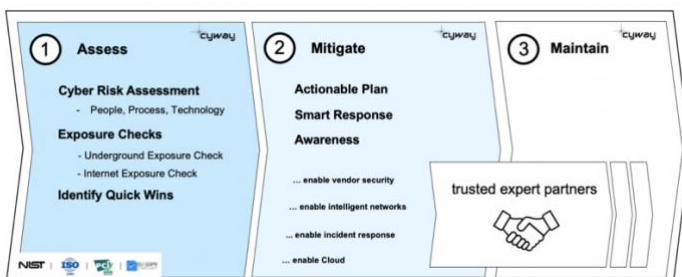

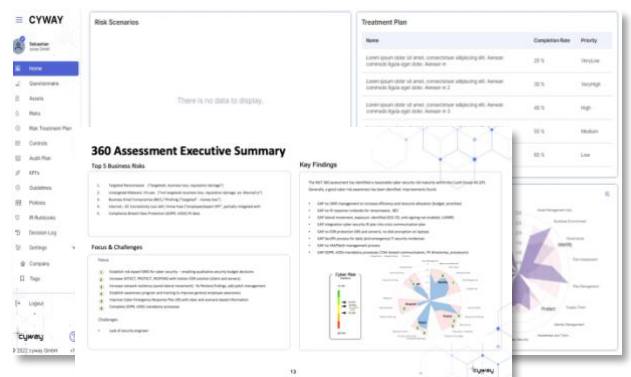

The purpose of the Cyber Risk evaluation is not only to identify problems before they occur but also to become capable of responding whenever they do occur. As a team of experts with many years of field experience in detecting and protecting companies against cyber threats, cyway provides practical guidelines for measures and remediations with proven return on investment.

Methodology

Profit from a modern methodology is a systematic risk-based approach named the *ICT Minimum Standard*, using known public standards such as NIST CSF, ISO 2700x promoted by the Swiss National Economic Supply ([NES](#)) in the course of the National Cyber Strategy ([NCS](#)). The methodology validates your company's cyber security posture including the ability to respond and recover from a breach. cyway therefore also captures the perception of risks by the Line of Business Leaders (LOBs), to uncover information assets of significant value if stolen or made unavailable.

Deliverables

- Identification of top 5 cyber risks
- Full ISMS tool build-up for cyber risk governance
- Actionable plan for cyber risk mitigation including aligning senior management
- Expert support in establishment of effective Security Monitoring, Incident Response up to SOC/CDC (Defense Center) building
- Expert support for cloud transitions & governance
- Expert support for Cyber Risk Use Case framework
- Expert support in building Cybersecurity Key Performance Indicators (ISO27001 and SOC/ISAE)
- **Comprehensive Report** including a high-level executive summary, outlining findings how to achieve and maintain the ICT Minimum Standard (optionally in combination with cy360 ISMS Tool)

Make your business Cyber Risk Resilient
